Local Substation Project Information

Crystal Substation Improvement and Expansion Project

AT DOMINION ENERGY, we would like to provide an update to the Crystal Substation Improvement and Expansion Project. On Nov. 14, 2020 we received Arlington County Board approval to construct the project. We invite you to learn more about the construction process, which is expected to begin in April 2021, at our upcoming virtual community meeting.

Our project team will provide an overview of what to expect throughout the construction process and answer any questions you may have. We will also provide an update to the public art installation and introduce our selected artist. If you missed our Aug. 2020 virtual community meeting, a recording is available on our project website.

At Dominion Energy, we know many of our customers are facing challenges due to the COVID-19 pandemic. We're here to help. In accordance with the law recently passed in Virginia, we're offering payment plans between 6 and 24 months. To set up a payment plan, or view additional assistance options, please call 1-866-366-4357 or visit DominionEnergy.com.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.

VIRTUAL COMMUNITY MEETING
Wednesday, March 17, 2021
6 – 7 p.m.

AGENDA

- What to expect during construction
- Public art update

CONTACT US

Visit our website at DominionEnergy.com/crystal to view project information. Or contact us by calling 888-291-0190 or sending an email to powerline@dominionenergy.com.

WHAT:

This project involves making improvements to the existing substation and expanding the substation on a portion of the adjacent parcel, currently owned by Arlington County. In exchange for the adjacent parcel, Dominion Energy will grant existing property located at S. Ives Street to Arlington County.

WHY:

AGING INFRASTRUCTURE — Much of the equipment inside the substation is approaching the end of its service life and needs to be replaced.

LOAD GROWTH — Additional infrastructure is required in order to continue serving the present load, meet the network reliability criteria, and prepare for anticipated load growth in the revitalized National Landing area.

SAFETY REGULATIONS — The existing substation needs physical improvements for safety and reliability of service. An increase in space will allow us to maneuver inside the substation to reach our equipment in a safe and efficient manner.

WHERE:

Crystal Substation is located at the intersection of South Fern Street and South Hayes Street in Arlington County, Virginia.

What is a substation?

A substation is a facility that changes voltage from high to low or from low to high using transformers. The lower voltage electricity is delivered to customers using electric distribution lines.
